

Project Proposal: PalSika

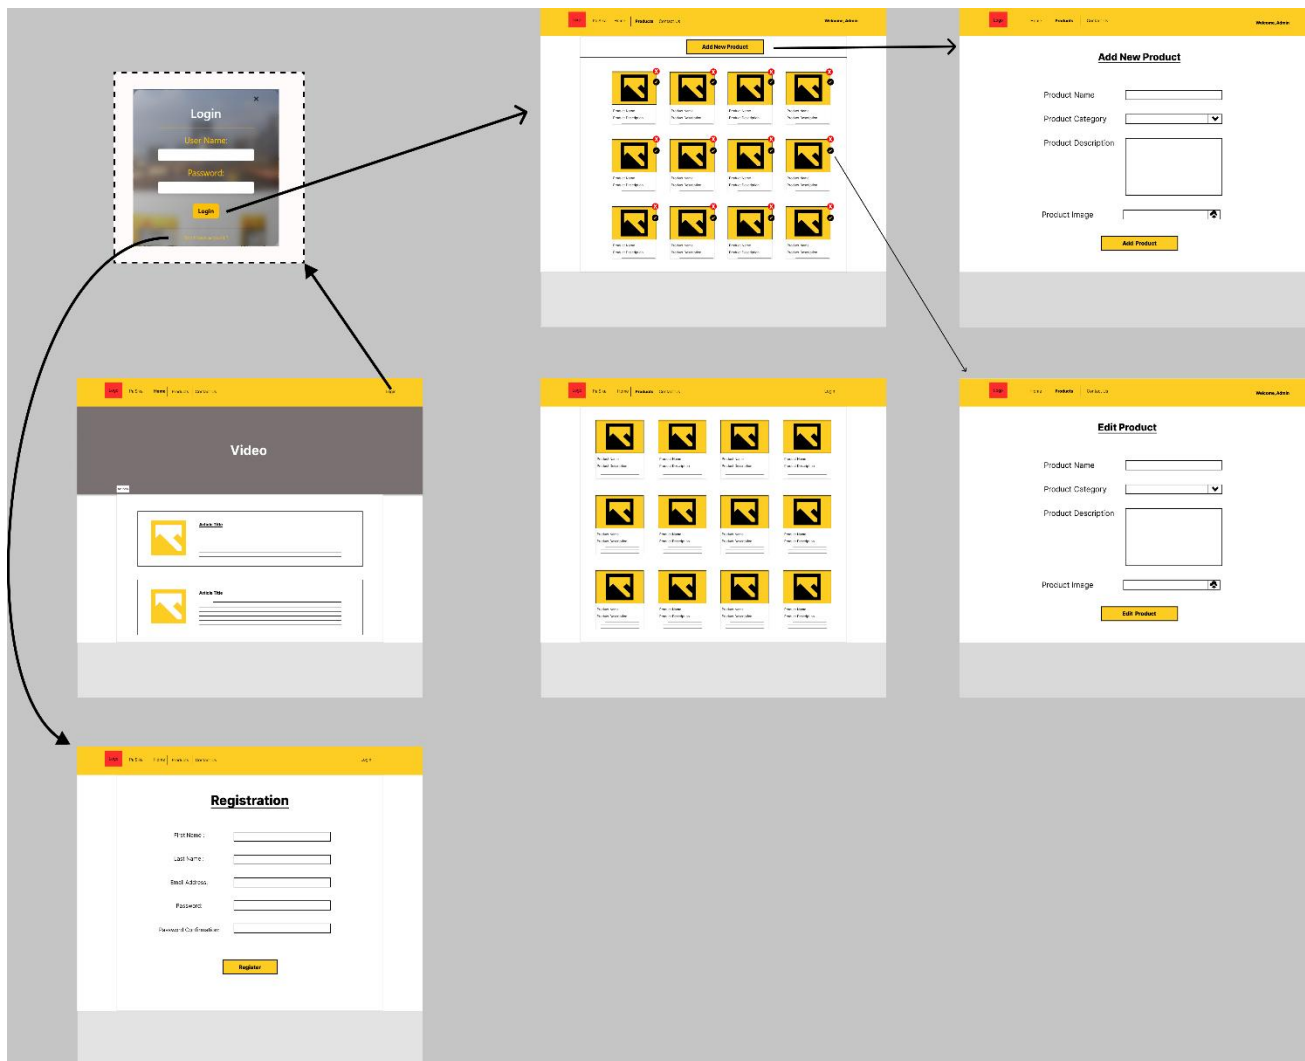

Abstract

This project aims to create a website for PalSika company which focuses on marketing and distributing Sika's construction material products at the West-Bank, Palestine. The project will provide PalSika with a website that focuses on delivering two main points, helping PalSika to manage and present their products, and allow the customer to reach to PalSika available products and find all the required information about them before they make an order.

Requirements

- Main page will present two articles (recent products added to the site).
- Navigation bar at the top to help in navigating between multiple pages.
- Login window for PalSika employees which gives them authorities to manage products.
- Registration page to add new PalSika employees accounts to the system.
- Product page (Clients) will display all the products available at PalSika system.
- Product page (Admin) will display all the products available at PalSika system, a delete and edit button for each product, and a "Add New Product" button.
- Edit page (Admin) will display the related information of the selected product to be edited.
